

SYR P&T VALVES

**Safer - better: SYR's P&T valves
reliably prevent excess pressure
and stemming from overheated water.**

Efficient building services

Simple installation and safe protection against excess pressure and overheating water. The P&T valves from SYR.

- prevents excess pressure
- prevents stemming from overheated water
- high temperature resistant synthetic material
- fully rotatable
- DN 15 - DN 50
(synthetic material)
- DN 25 - DN 32
(body made of high quality low-lead brass alloy)
- DN 40 - DN 50 (body made of dezincification
resistant low-lead gunmetal alloy)
- DN 20 also available with second connection
(as an option)

Contact us - we will be pleased to help you.

The temperature and pressure relief valve is a safety valve designed to reduce excess pressure stemming from overheated water and normal water pressure.

The valve prevents excess pressure from causing tanks to burst. The P&T valve is intended for unvented hot water tanks and hot water storage tanks.

Technical data

Available set pressure	3 - 10 bar
Mounting position	any; discharge opening facing downwards
Connection size	DN 15 - DN 50
Fluid	potable water
Temperature range	93 - 98 °C

QUALITY

 Made in Germany
